

# CyberSource Secure Payment Acceptance: Siebel®

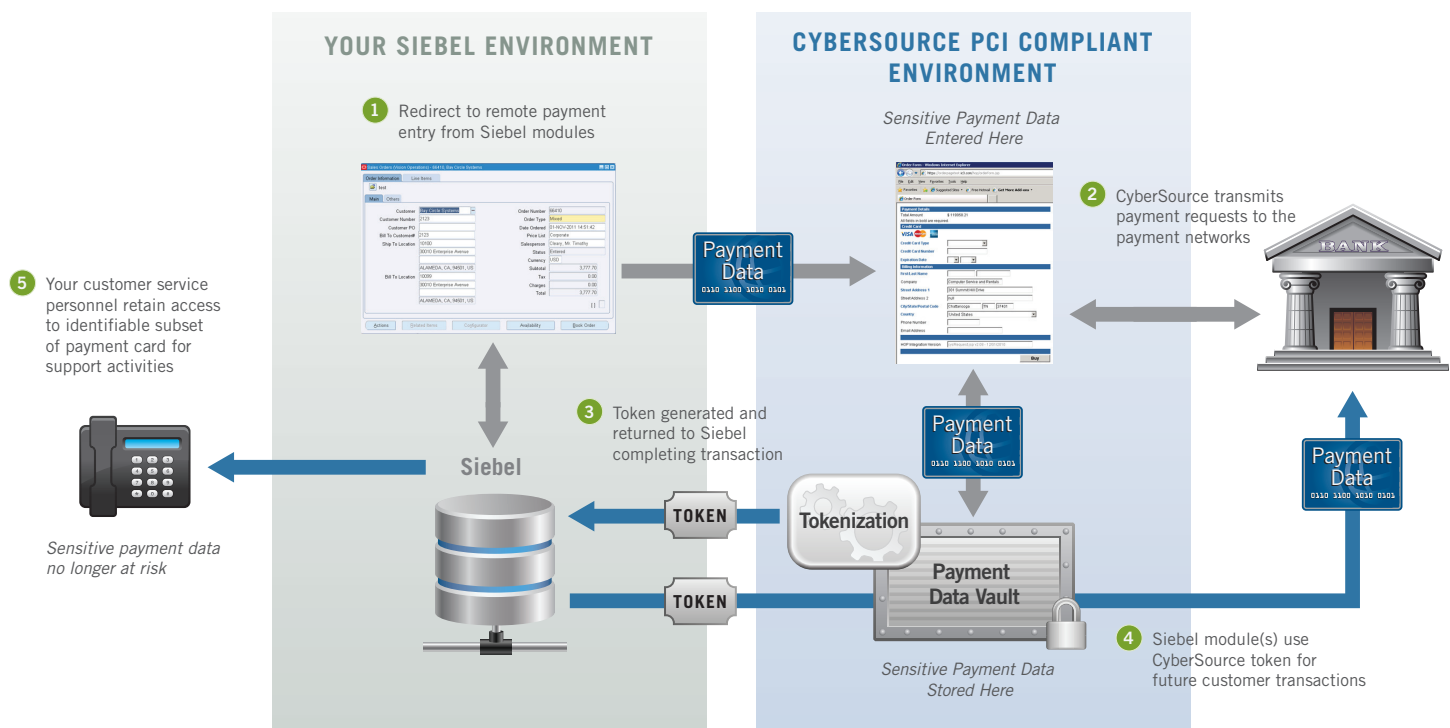

CyberSource®

Reduce Payment Data Storage Risk from Order-to-Cash

Siebel electronic payment acceptance fulfills a key function within your organization. However, storing sensitive payment data may expose your organization to significant security risks and increase your team's PCI Data Security Standard (PCI DSS) compliance workload. PCI DSS compliance is costly for your organization, consumes your team's resources, and *still* leaves you exposed to a payment data security breach. CyberSource offers a better way to secure payment acceptance while reducing your PCI DSS footprint.

## CyberSource Secure Siebel Payment Acceptance

CyberSource Secure Siebel Payment Acceptance removes payment data from your Siebel environment using hosted payment acceptance and tokenization. With sensitive payment data out of your environment, the Siebel application components are no longer part of your organization's PCI DSS scope.

### How It Works

1. Users and customers enter sensitive payment data on a CyberSource payment page hosted within a PCI compliant data center
2. CyberSource transmits payment requests to the payment networks
3. CyberSource generates and returns a token, serving as a proxy for the payment card number
4. Siebel utilizes the token for future transactions
5. Customer service personnel retain access to identifiable subset of payment card for support activities

## Implementation

CyberSource provides project managed delivery within your System Development Lifecycle (SDLC). CyberSource also recognizes the ongoing nature of your Siebel application SDLC, and structures delivery to minimize costs of future Siebel application release efforts. We ensure that your staff is equipped to maintain CyberSource Secure Siebel Payment Acceptance within your future Siebel application releases.

Implementation options include:

- All Siebel applications (versions 7.X and above)
- Customization options for international/multi-lingual Siebel deployments
- Fixed price delivery approach
- Purchase Card Level II and Level III support

## The CyberSource Advantage

Leverage the 'Payment Experts'. CyberSource Payment Management Solutions can help you optimize and improve your Order-to-Cash processes.

- Accept payment methods preferred in local markets, transact payments in over 190 countries, fund in 21 currencies
- Improve efficiencies and data reconciliation by connecting to multiple processors through a single connection
- Leverage value added services such as Account Updater, Fraud Management, Sales Tax Calculation, and more

## Get Started

To reduce payment data security risks and PCI compliance costs, contact your CyberSource sales representative, or call us directly at **1.888.330.2300** today.

## Benefits

### Improved Data Security

- Reduced PCI DSS scope
- Decreased potential for data loss in the event of security breach
- Increased IT project capacity for meeting core business needs

### Improved Payment Reconciliation

- Easier transaction reconciliation from within accounting system environment
- Improved receivables and cash flow
- Manual, error prone processes eliminated
